☐ How to Safeguard Your Printing Environment.

Date: Nov 23 2010

3/6,K/1 (Item 1 from file: 148)
0027631314 **Supplier Number:** 242732378 (USE FORMAT 7 OR 9 FOR FULL TEXT)
How to Safeguard Your Printing Environment.

Nov 23 , 2010
Word Count: 1082 **Line Count:** 00086

.. initial public offering (IPO) documents were laying in the output tray
of an unsecured printer where the documents were available to junior
traders and investors. **Unauthorized** sharing of the information
resulted in $7 million dollars of profit loss, unspecified fines to the
institution and dismissal of analysts at the firm.
   This...

...is the equivalent of allowing your server to be taken out of your
business.
   The first step to securing the device is to encrypt the

data on the hard disk. Even if someone tried to access the disk,
encryption would prevent them from reading the **data** stored on
it. The next step is erasing the **data** after a document has been
printed to prevent the **data** from being unnecessarily stored and
potentially accessed-this can be enabled at installation.
    Many solutions offer flexible options, including setting a schedule
that automatically deletes...

...but they can also expose passwords and destination addresses (as well as
other sensitive network information).
    For example, the man-in-the-middle (MITM) attack **reroutes**
information to a computer first, allowing them access to the
data. Print jobs can be **rerouted** to a different
printer or a computer without anyone knowing. Students at a prestigious
university **rerouted** print jobs that were being sent from their
professor's computer to the department printer. This resulted in full
access to the final exam before...

... users or devices involved. Companies can print documents using a variety
of solutions that encrypt and secure files, making them nearly impossible
to read if **rerouted** or intercepted.
    Final thoughts
    As attacks increase in sophistication, enterprises should implement
security features that are included in most MFPs and upgrade security
features as...

...or commercial electronic messages, spyware and phishing, among other
things. It also provides additional amendments to PIPEDA, including
prohibiting the collection of personal information through
unauthorized access to computer systems, and prohibiting the
unauthorized compiling of electronic address lists. FISA is also
at the second reading stage in the House of Commons.
    Below is a list of the most...

... of personal information?
    To date, outside of Alberta and certain provincial health
information legislation, Canada has not had mandatory breach notification
requirements for businesses facing **unauthorized** access or
disclosure of personal information they collect (privacy breach). Until
now, although the Office of the Privacy Commissioner and some provinces had
provided guidelines...

...consent.14
    FISA also attempts to prevent "man in the middle attacks," where an
electronic communication, intended to travel between two parties, is
intercepted and **redirected** without either party's knowledge.
FISA prohibits the altering of transmission **data** in a message so
that the message is routed to another destination. Under this bill, all
alterations of transmission **data** require the sender's express
consent.15

Therefore, companies should be cautious with the electronic messages
they send out and ensure they are complying with...

0027478422 **Supplier Number:** 239941557 (USE FORMAT 7 OR 9 FOR FULL TEXT)
Interfax Russia & CIS Oil and Gas Weekly.(Company overview)

Oct 6 , 2010
Word Count: 24556   **Line Count:** 01971

... oil companies that applied to bid at the tender for the rights to the
big Trebs-Titov oil fields were disqualified for not submitting sufficient
data about contractors, human resources and technology.
according to the minutes of a meeting of the tender commission on September
27 that barred the bidders.
    Lukoil... up on September 30
    "We know that Russia has opened up new opportunities for energy
supply to China, and we are pleased that Russia is **redirecting**
its supplies to Asia," Lu said. "Sakhalin plays an important role for China
from the point of view of oil and gas supplies," she said...districts. The
first test well was drilled into the Cenomanian horizons in 1970 in the
northwestern portion of the field. The reserves increased after seismic
data obtained in 1992-1994 confirmed that the Cenomanian
horizons of Yamsoveyskoye and Yareiskaay were connected. The field has
yielded a total of about 270 bcm ...On introducing amendments to some
legislative acts on strengthening state control over oil traffic control."
    The document seeks to curb the theft of oil via
unauthorized tie-ins into trunk pipelines.
    According to a Majilis member Valery Kotovich, the bill reintroduces
administrative and criminal penalties for illegal transportation,
acquisition and sale...

...for oil theft from pipelines and purchase and sale of illegal oil.
    The Majilis members referred to a steadily rising rate of oil thefts
and **unauthorized** pipeline tie-ins.
    "Despite the measures taken to ensure better protection of main oil
pipelines by oil transport companies, the situation continues to
deteriorate. The...

Campus perceptions of fair use violations: implications for university policy development

Oct 2010 **Length:** 9 Pages
Word Count: 3018
Text:

...becoming Public Law No. 110- 315. It is composed of eleven sections and is 431 pages long. What makes this legislation so important is the **content** of sections 488 and 493 which mandate that institutions of higher education (IHEs) develop plans to combat illegal downloading and peer-to-peer distribution of...

...and sanctions related to copyright infringement:

"(P) institutional policies and sanctions related to copyright infringement, including-

"(i) an annual disclosure that explicitly informs students that **unauthorized** distribution of copyrighted material, including **unauthorized** peer-to-peer file sharing, may subject the students to civil and criminal liabilities,

"(ii) a summary of the penalties for violation of Federal copyright laws; and

"(iii) a description of the institution's policies with respect to **unauthorized** peer-to-peer file sharing, including disciplinary actions that are taken against students who engage in **unauthorized** distribution of copyrighted materials using the institution's information technology system (H.R. 4137, 2010).

Section 493 stipulates that IHEs will develop plans and offer alternatives to illegal downloading:
"(29) The institution certifies that the institution-

"(A) has developed plans to effectively combat the **unauthorized** distribution of copyrighted material, including through the use of a variety of technologybased deterrents; and

"(B) will, to the extent practicable, offer alternatives to illegal...

...File Sharing @ OSU (2010). While each one has basic information about file sharing and copyright infringement, the University of Michigan site has specific sections for **content** creators, instructors and students. It also spells out responsibilities for both users and the university. Oregon State University has included an on-line tutorial on...

...Florida has implemented software to detect illegal file downloading and is holding the students accountable by forcing them to accept USF's policy on a **redirected** web page (Emerson, 2008).

Students need to be more aware and have a better understanding of the copyright laws and "Fair Use." Students are also ..

...for the university or college. For example, recently Georgia State University was sued because of the way they used "E-Reserves" and other "electronic course **content**" (Alganese, 2008, 16). Georgia State was illegally posting and sending copies of its "electronic course **content**" via its "Blackboard/WebCT electronic course management system" (Alganese, 2008; Howard, 2008).

...system;
      changing or interfering with settings or preferences on the computer
system without the user's knowledge;
      interfering with access to or use of that **data** on the
computer system;
      causing the computer system to communicate with another computer
system without the authorization of the user; or
      installing a computer program. .

...exempt, if the recipient consented to the initial installation and is
entitled to receive upgrades or updates.
      Anti-Phishing
      The FISA also prohibits altering transmission **data** in a
message, or causing it to be altered to route the message to an unintended
destination without the sender's express consent or a court order. This
provision is aimed at activities such as "man-in-the-middle" attacks
(intercepting and **redirecting** messages without the parties'
knowledge) and "phishing" (impersonating a legitimate organization to steal
valuable personal **data**).
      Telemarketing
      At this time, the FISA does not address two-way voice communication
between individuals, notably telemarketing. Telemarketing is regulated
under the Telecommunications Act, in...

...to prohibit false or misleading commercial representations made
electronically. It would also amend the PIPEDA to prohibit the collection
of personal information by means of **unauthorized** access to
computer systems, and the **unauthorized** compiling of lists of
electronic addresses.
      Penalties and Private Right of Action
      If the FISA is passed, violators could face fines of up to $1...

iPhone Jailbreak Exploits Remote Security Hole 115942.

August 3 , 2010
Word Count: 444   **Line Count:** 00037

...JailbreakMe 2.0 exploit takes advantage of two distinct vulnerabilities
of free devices running Apple's iOS. Now officially legalized, jailbreaking
allows users to run **unauthorized** third-party applications on a
mobile device.
    The first bug Jailbreak 2.0 uses is related to the processing of
Compact Font Format **data** within a PDF document, explained Vupen
Security CEO Chaouki Bekrar. The second is a flaw in the kernel that can be
exploited to "gain elevated privileges and bypass sandbox restrictions."
    Attackers could exploit the first bug remotely by tricking iPhone
users into visiting a malicious site that would then **redirect**
the browser to the appropriate malicious PDF file depending on the device
model and version, Bekrar said. Once done, the kernel flaw can be exploited
...

SEN. BLANCHE LINCOLN HOLDS A HEARING ON THE FARM BILL

Jul 22, 2010
Word Count: 29127
Text:

.. But you have a rural county. a metro county, a rural county. and in order to get from one rural county to the other, a **provider** goes through that more urbanized county, and that's where the conflict comes in. And you need to give real focus to that and direction...end users, and would limit the availability of RMAP to smaller organizations, especially the interim final rule's higher interest rates, lowered grant levels. and **unauthorized** limitations in matching requirements.

In the interest of time, I'm going to skip some of the specifics and submit my letter that I sent..

...implementing the final rule, formulating the final rule.

Do you anticipate any challenges in resolving the issues with higher interest rates, lower grant levels and **unauthorized** limitations in matching requirements? Do you believe it will have an impact on those who will be awarded by RMAP later this summer? And I...if -- but only if -- the infrastructure barriers are removed.

Last week at Growth Energy, we rolled out the "fueling freedom plan" that urges Congress to **redirect** some of the government assistance into building out the infrastructure -- mandating flex fuel vehicles production and creating incentives to install blender pumps. If we had...

...save a substantial amount of that $300 billion.

We're not advocating the elimination of government assistance right now. What we're saying is, to **redirect** some of it to the infrastructure so that we can have access to the market where we can compete once that infrastructure's in place...

...ambivalence about how to account for the carbon from biomass energy that conflicts with some of the more well- established international conventions -- the Greenhouse Inventory **data** and EPA's own statements that recognize that biomass energy in countries like the U.S. where our forests are net carbon sync (ph) do...grateful for that.

As far as the proposal is concerned, we believe that we should have the blenders tax credit. But it needs to be **redirected** over time, so it doesn't just go to the blenders. It should be going to round out the infrastructure, so that Americans can buy.. the extension of current tax policies and the extension of the secondary tariff on foreign ethanol.

Of course. our preference would be to extend and **redirect** some of this assistance into the building out of the infrastructure. because ethanol's so competitive right now. that really, it's a matter of ...

06849532   2082406671

Cyber Insecurity

Jul 16, 2010
Word Count: 797
Text:

...reasons, Google said it would not cave in. Business is business,
however, so Google eventually moved its service to servers in Hong Kong. It
then **redirected** Chinese users to what many considered to be
sanitized sites and **data**, but life went on and the strategy was
successful. Its license was renewed.
So, why raise this issue in a column generally devoted to trade compliance?
Because one of the fundamental, unfettered "rights" we expect is the
ability to exchange **data** in a secure, timely and accurate
manner. After all, isn't that what the Customs-Trade Partnership Against
Terrorism, Free and Secure Trade, Importer Security...

...legitimate system penetrators whose mission is to protect their
companies' assets -- and "black hat" hackers, who access your system
without permission and want to steal **data**, or worse.

In a June 2008 speech, Daniel Baldwin, assistant Customs commissioner for
international trade, talked about counterfeit goods as presenting "serious
threats to our...

...time, we had already heard about computer systems being hacked at the
Air Force, Navy, Marines, Federal Aviation Administration, FBI and General
Services Administration, with **data** and personal information
compromised. Even then, there were discussions about the threat of
counterfeit or infected integrated circuits that could bring down military
communications and...

...all live and die with our e-mails. The specter of one's hard drive
crashing and the inevitable, seemingly interminable delays to retrieve the
data, is enough to cause shivers to run up and down one's spine.
So when Customs talks in terms of IT integrity that should "protect
data from **unauthorized** access or manipulation," that
goal is not so far-fetched.

At the same time, is it enough when Customs says you should have accounts
assigned...

...After all, your servers hold everything of value to your business. How
are you stopping your competitors and other "bad guys" from accessing that
valuable **data**?

Susan Kohn Ross is an international trade attorney with Mitchell Silberberg
& Knupp in Los Angeles. She can be contacted at skr@msk.com.

☐ Interlax Russia & CIS Business and Investment Weekly..

    Date: June 25 . 2010

...a statement.
     MTS might purchase shares from minority shareholders with cash and
stock.
     *** Two more regional fixed-line providers have approved mergers
with long-distance **provider** Rostelecom.
     Northwest Telecom (NWT) approved the merger at its AGM on June 19
and VolgaTelecom approved it on June 21 at its AGM.
     Svyazinvest holding...

.. supplies to Europe, which receives about 20% of supplies via Belarus and
the Yamal pipeline, are unlikely to be adversely affected, as gas can be
redirected via Ukraine.
     Limits
     Gazprom's CEO Alexei Miller has announced that as of 10:00 am June
21 Russia has introduced limits on gas supply...have seen the same
situation today as well." Miller said at a conference hosted by Russian
Prime Minister Vladimir Putin at the Novokuznetsk airport.
     The **unauthorized** taking of Russian gas by Belarus has
caused problems with the power supply in the Kaliningrad region, Sechin
said.
     "Unfortunately, gas taken by Belarus cuts...1 billion in the first
half of 2010 compared with the same period last year, Vice President
Vladimir Nekrasov said at the AGM, citing preliminary **data**.
     "The Russian market is demonstrating cautious growth," he said.
     The recession in Europe has ended, but not much growth has been
registered, mainly due to.. the bank will own 16%-18% in Inter RAO's
capital. The company hopes to close an option agreement with VEB for buying
back this **packet** through its Cyprus-registered subsidiary
Silverteria Holdings in three years. Inter RAO's shareholders will vote on
this measure at their annual meeting salted for...and continents," he said.
     COMPANIES & MARKETS
     More telcos approve merger with Rostelecom
     MOSCOW. (Interfax) - More regional fixed-line providers have
approved mergers with long-distance **provider** Rostelecom.
     Northwest Telecom (NWT) approved the merger at its AGM on Saturday
and VolgaTelecom approved it on June 21 at its AGM.
     Svyazinvest holding chief...

.. other two are Southern Telecom and SibirTelecom.
     Shareholders in Southern Telecommunications voted at their AGM on
June 16 in favor of merging with long-distance **provider**
Rostelecom, Yevgeny Yurchenko, the fixed line **provider**'s board
chairman, told reporters.
     Yurchenko, who is also general director of fixed line holding
Svyazinvest, said shareholders with 79.84% of issued shares voted...

...TeliaSonera out of MegaFon in light of a ruling to invalidate a court
ruling to invalidate an agreement to merge stakes in the Russian cellular
provider and Turkey's Turkcell in order to form a joint venture.
     "We'll one again invite Altimo and TeliaSonera to start negotiations
about a MegaFon...

...appealing," he said.
     COMPANIES & MARKETS
     MegaFon widens gap over VimpelCom inAaRussian subscriber numbers
     MOSCOW. (Interfax) - MegaFon, long considered to be Russia's No.3
cellular **provider**, has widened the gap over rival VimpelCom in

terms of Russia-based subscribers that emerged in April.

MegaFon had 52.666 million Russia-based subscribers...Vadim
Mikhailov, said that the carrier was considering an IPO of up 50% of the
shares in Freight One or the sale of a blocking **packet** to a
strategic investor following the public placement of around 25% of the
company's shares. Media reports have cited Lisin as one of the...own shares
from Danone.

"If Danone offers us their shares, we are then ready to look into
the possibility of buying a portion of the **packet**," Marina
Kagan, a member of WBD's managing board, told Interfax. She said that the
group was largely interested in common shares, which could be.. plus one
share in the bank was acquired by Ingosstrakh, which is controlled by
BasEl. In addition, Russia's Deposit Insurance Agency received a control
packet in the bank.

"We are continuing cooperation with DIA in the framework of the
bank's financial restoration, which has been producing tangible results,
that. .

...Monday.

But the mood soured in the global markets as early as Tuesday, when
spread widened to more than 200 bp, and weak U.S. **data** worsened
the situation on Wednesday.

Thursday began on a brighter note after the Federal Reserve had said
base rates would stay low for a lengthy coming week unless the global
equity and commodity markets pick up. They could indeed see significant
gains if the United States puts good **data** out and depending on
EU the governments' actions to resolve the debt crisis.
     (TABLE OMITTED)
     STOCKS
     FORECASTS & MARKETS ANALYSIS
     Russia stocks retreat onAaglobal growth concerns...

...stocks declined last week, erasing the gains of the previous week, on
concerns that global growth is slowing, triggered mainly by weak U.S.
economic **data**. The dispute between the U.S. and Europe over
whether government spending should be increased or cut back also weighed on
stock prices. Investors await...

...Poor's issued a warning over banks in Spain.

On Wednesday the MICEX index drifted below 1,380 points as investors
reacted to weak housing **data** in the U.S.

However, Rostelecom gained 3.6% on MICEX and 11.4% on the RTS on
news shareholders in regional operator Uralsvyainform had...

...percent. And again, those are things that we have to look at. SBInet
was created to strengthen the ability to detect, identify and respond to
unauthorized entries, and certainly some of the performance
capabilities have been relaxed.

I'm one of those I feel that using, in my personal opinion, using... and we're doing that in some phases because it's a -- it's a deliberative effort. And the first of those we should have **data** by the end of June. And that **data** will be focused on an analysis of Arizona and then based on that we can extend that analysis to other parts of the border.

But...

...HITE: See, I -- I hesitate to give you a -- a definitive answer on that. You know, making those kind of tough decisions requires access to **data** that I haven't seen. It's -- it's -- it certainly is a legitimate question to pose at this point in time, but if I...

...here in the last 18 to 24 months bringing in more capability, trying to address some of these limitations, it's hard to, you know, **redirect** an iceberg once it's started moving in one direction. And that's, you know, what we've been faced with.

CARNEY: At least icebergs...get together before the day of the hearing and compare notes. But the GAO is with us all the time. We have many exchanges of **data**. They interview us for their -- for their findings. They come in and they tell us what they are seeing and ask us: Are we aware...so forth, the question would be: Is there utility in taking all of that information, sending it to one place and doing something called -- like **data** fusing it? It's very expensive, but it has benefit.

So that would be a vision for the future. The first question is get technology...

                **

Symantec Analyst Meeting - Final

May 27, 2010
Word Count: 53465
Text:

...deployed it already, and they're very pleased with the integration of our enterprise, vault technology, and some of the enhancements we've made with **data** de-duplication.

Backup Exec, 100,000 copies have already been installed. And so, we focused on quality and again, quality is an important indicator of...
...down costs. Well, those days are now changing, because executives bring in their latest fancy device, and they say to IT I want my corporate **data**. That strikes terror into the heart of every CIO because now on that device, they have access to everything inside the corporation. And so, this...

...last several years.

And then lastly, the Cloud and the Cloud is really a form of service delivery. Whether you deliver it from your own **data** center, which is what IT is spending a lot of time building out what we would call the private Cloud, or you deliver it from...

...lot of time and when we think about protecting information, there's two sides. You've got to be able to backup and recover the **data**, and you've got to be able to secure it, got to keep it from being stolen. So, two important pieces to information protection.

Number four, context and relevance. We're creating more unstructured **data** at a faster pace than ever before. So, the context you're in. My role as CEO, my role as a family member is relevant...

...of her applications, and she's back up and running because what happened is the information follows her, because what matters is Julie and her **data**.

She goes into the meeting, she does her presentation, she gets the reminder that it's her mom's birthday. Now, she has to go...

...and cost effective. If you need to provision a new service, you don't need to buy new hardware. It's just delivered from the **data** center to where you are. This is the concept of endpoint virtualization, or services delivered from a shared or public **data** center.

So, in the future what you have, Symantec won't deliver the devices, we won't deliver the applications, we won't deliver the...

...perspective.

When you look at what we're doing on context and relevance, we've got a number of things we've done with our **data** loss prevention products where we categorize information, we've got work that we've done in our backup and recovery, because you've got to...

...with this vision, what we've put together, it's not about consumer or enterprise. It's not about the information that lives in your **data** center or over the public Internet. What this is really saying is that there's a different future that will evolve. We've got a...
...Third area is storage. We think we have an opportunity to help businesses build the public Internet, and also the private Internet, or the private **data** center in their environments. Lastly, we'll drive new licenses around a new form factor, appliances. Our customers have .. other clear examples. Symantec is in a very unique position right now. We've built the product that we announced at our vision conference called **Data** Insight. We talked about it at RSA. And what **Data** Insight does is it basically allows us to start solving the problem of **data** ownership. The reason that we're able to do that and extend our **data** loss prevention business is because we have deep knowledge of file systems.

I'll give you an example. Today, whether you're on EMC array or a net app filer, what we're able to do is we can track who created the **data**. That's essential, because when you look at that future where information from my personal life and from my work life are co-mingled. IT. .

...in the five years since doing the Veritas deal, we've shown a connection. We've shown a connection that matters to customers. We shipped **Data** Insight before the end of the March quarter, and we closed our first deal within days of shipping the product. Because one of the biggest problems that customers have is being able to figure out who owns the **data** because if you're going to secure it and you're going to manage it, you have to have that ability to understand who owns...

...room.

MICHAEL TURITS, ANALYST, RAYMOND JAMES: Thanks, Enrique. Michael Turits

from Raymond James. For a number of years, you've had a broad vision of **data** security and **data** assurance, broadly put. And yet, the revenue that's come in in fairly traditional buckets. endpoint security. backup. As you leverage this new vision for...

...Cloud delivered services, while there'll be some overlap between the services we deliver from the Internet and the services we deliver from the private **data** center with our on premise solution. There is an opportunity around Software-as-a-Service that we see as an opportunity to grab wallet share...

...the threat landscape, certainly over the last 18 months, two years. Today's attacks are predominantly led by targeted attackers. In fact, the majority of **data** breaches that happen today aren't driven by hackers, they're driven by a more organized element with the aid of insiders. A targeted attack...

...we think about security going forward. So, we're seeing the growth of targeted attackers and in fact, targeted attacks are the predominant sources of **data** breach today, aided by insiders very commonly.

Secondly. when you talk to IT security individuals. they'll tell you that today they have ...that, they'll tell you that they have not only their physical infrastructure, but increasingly a virtual infrastructure that they are responsible for, a virtualized **data** center, virtualized end point. On top of that, they have a private Cloud they're building out, and a public Cloud as well that they...

...4 million. That's driven primarily -- and that's in the US, and that's driven primarily by the costs associated with complying with the **data** breach and notification logs. Over 40 states have now enacted those logs that say when a breach happens. you are required to notify the owner of that **data** that the breach has happened. and put a number of remediation steps in place.

As those types of regulations take hold around the world, we...

...And one of the things that gets called out frequently is the differentiated portfolio we have and I'll pick one of the suites, our **Data** Loss Prevention Suite. And when we take that to market, we can very clearly articulate how our DLP offering is different from anyone else's in the market. And it really focuses around things like **data** ownership. right. One of the things that customers find when they roll out DLP, they say fine. I know this confidential information exists here. Who ..

.. about it? Do I need to encrypt it? Do I need to move it? And to do that, you need to know who owns the **data**.

But very often when you look at a file, it says the author is Administrator. or somebody who left the company. We are unique in...

...When you look at surveys that show what's top of mind for CISOs today, for the last three to four years consistently, topics like **data** loss prevention and compliance have been in the top five. Well, we are far and away the share leaders in both those categories, and that...

.. that machine, right, so you'll get that in SBS ABE. The other area we're focusing on is around the MSP, the managed service **provider** segment.

What they are is a part of the market, a reseller part of the market, that focuses on the small end of the SMB...we acquired MessageLabs some 18 months ago and we have executed on that acquisition very, very well. And

so, I'll give you some key **data** points to show you how we have
not only picked up that business and successfully brought it in but grown
it over the last 18...
.. healthily growing market, and it's certainly a market that we need to
participate in. We've broken that down further, and this is IDC
data with our analysis layered on top. We've further broken it
down into the segments of our business that we're interested in looking at
...

...good and we're excited to get it out into the marketplace. And then,
last is investing and growing up the stack, so investing in **data**
loss prevention, investing in online back up. So, we're looking at those as
we move forward.

So, that's on the portfolio side. So...we talk about a broader swath of
our portfolio. So, we find that we're in a better competitive position
there.

In terms of the **data** file, that was a pretty significant event.
Some of you may have read in the press that some of the stories. I know
that half...

...in Rhode Island, weren't able to operate. So they weren't able to do any
operations because they were down, because of the McAfee **data**
issue. So they were saying, look, if you don't -- unless you are in a very
critical state, our operating rooms aren't available.
We...

.. of paying off is really allowing us to do things that are truly
distinctive. Nobody else can do. So we talked a little bit about
data insights, this -- we're really the only company who can do
that because we had engineers and security and storage that can work on
that...of the new product areas. there are two core areas, you've heard
them both mentioned earlier today. One is FileStore, the other one is
Data Insight. FileStore is our storage appliance. This is
technology that's built on the core capabilities we have had in our Cluster
file system, in...

...with antivirus scanning, for example, so that it reduces the amount of
load that you put on the network in terms of scanning your file
data.

The second area where we're making a lot of investment is **Data**
insight. **Data** Insight, the first shift was with DLC, as Francis
mentioned. The **Data** insight is a unique piece of technology that
leverages both the security capability as well as our file system
capability. What it really does is...

.. tell instantly who the owner of a file is.
Why this is usually a problem is in most companies, if you look at the
meta **data** of the file, it says admin. It doesn't give you any
real information. With our DLC product, for example, it finds any kind of
sensitive **data** in a file, let's say personally identifiable
information, like a social security number, in order to remediate that, you
need to know who the...

...INFORMATION MANAGEMENT GROUP, SYMANTEC CORPORATION: Sure. So the
information management growth has three or four flagship offerings.
NetBackup, which is the world's number one **data** protection
product, with FY '10 revenues of about $800 million. The second is Backup
Exec, which once again is the number one **data** protection product
for the SMB and Windows market segment and with FY '10 revenues of about
$400 million. The third is Enterprise Vault, our -- once...

...like to shift gears and talk about one of the trends that we're addressing, which is the massive growth in information. We're seeing **data** growth, for many of our customers, around 50% per year. That's typically divided into two pieces. unstructured **data**, which is growing at about 75%, and what they've got in their --their structured databases that have grown about 25%.

Our core business value...
...about some problems happening with some of the world's leading auto makers and oil companies.

But what do you think is happening in the **data** centers? Search for information? Very often, the cost of this legal e-Discovery is actually much higher than any fines imposed on the company by...

.. to solve it. So we propose a new information management strategy that is based on four principles.

First being protect completely. This means a single **data** protection platform should meet all your needs. Because every time you add any point products, it increases the cost and complexity in your environment. The...

...plug into the Symantec ecosystem. The second opportunity's around virtualization. So as our customers deploy virtual solutions, they have to upgrade or deploy new **data** protection software.

Third is around archiving and attach also archiving platforms to NetBackup and our backup products. The archiving products help our customers distinguish between...

...this capacity-based model.
GREG HUGHES: Thanks, Deepak. Anil, what's the Storage and Availability Management Group doing to take advantage of the growth in **data**?

ANIL CHAKRAVARTHY: Yes, so two primary opportunities for us. One is around -- so as you mentioned, we deal with primary storage. this is the online...

...allocated to the application or to the database until the time that it's actually necessary to use the storage. Typically at the time that **data** is actually written to the storage.

Now what we do is two-fold in the PIN provisioning area. We help customers migrate from traditional storage...

...like solid state drives for example, which are high performance, but also high cost. So we know exactly what kind of applications, what kind of **data** we need to be that kind of high-performance storage and we are able to help our customers make effective use of that. So that...

...requests and do all this pretty non-disruptively, so that you don't actually impact the applications.

You could be doing operations like storage migrations, **data** migrations, storage provisioning, et cetera without disrupting the applications. So those are the two big areas we're focusing on. What we've really done...

...shared across the private Cloud. The third is in private Cloud storage. Building out their own cloud storage pool where our technologies, like FileStore or **Data** Insight and Storage Foundation. Object Store as well, come into play.

So, that's how we'll -- so we see a lot of opportunities in...

...ANIL CHAKRAVARTHY: No, Cloud is a very, very strong and important trend and we have over 1.5 million enterprise customers. We are the leading **provider** of these solutions. So our job is to help our customers leverage this strength and have Symantec be the **data** protection solution of choice here.

So, of course, Cloud is a very cloudy word. It's very, overused, right? So we look at it from...as well.

GREG HUGHES: Great. Next question.

BRENT THILL: Greg, it's Brent Thill with UBS. I -- you mentioned the double-digit growth in unstructured **data**, but there's a disconnect in terms of the growth rate that the storage business has seen. It's been the laggard relative to other... ...improving the last couple of quarters.

But can you just help us understand the disconnect between what you're seeing and the growth rate of **data** versus the growth rate of the divisions and what the capacity-based pricing model can do to help? Then the second question is margins. Your...

...Availability Management Group, is concentrated on high-end server systems and it's priced by server systems.

Now he is shifting to address the unstructured **data** growth. with FileStore. We will be able to capture more and more of that growth. But that's the simple reason why the decline last...

...partners, the hardware partners, they're all building these de-duplication appliance and they actually really like Symantec because we have really opened up our **data** protection products, which means, because we have the smarts and the intelligence upstream and we have opened up the stack to plug in their devices...

...leveraging the open storage technology.

So as I mentioned there are 15 OSV hardware partners who are all plugging in their devices into the Symantec **Data** Protection product. So we do all the smarts at the front end. IF the customer chooses to use those devices, we have a very, very...and an account SC, we'll augment them with a sales specialist or with technical specialization.

Those key areas for us are areas like DLP, **data** loss prevention, or end-point management technology or compliance technology, kind of next-generation **data** protection, so really focused on our **data** de-duplication and our enterprise vault archiving technology and like our managed security services. Those are some of the key areas where we have specialists...

...VeriSign that are in that user auth perspective. They'll be coming over, and we'll be putting together an organization very much focused around **data** loss prevention and encryption, that **data** protection side of it that Francis alluded to. They'll be aligned in that specialist model for us as well.

So what's the current...

...confident that we're going to win. When our sales team looks at our portfolio, this is what they see. From the endpoint to the **data** center, we have the number one solutions. You saw Francis's **data** points with whether it's Gartner Magic Quadrant, whether it's Forrester, whether it's IBC.

No matter what the analyst is out there, we...

...of these, we have number one market share revenue-leading positions, the best products and in the number one position, from the endpoint to the **data** center. It puts us in a position to have strategic conversations that very few IT providers can have with their customers. This team is absolutely...information that helps our designers more appropriately design a store that's appropriate for the customer.

So what do we do with all of this **data**? We have a lot of **data**. What are we doing with it? Let me give you a good, simple example. One of the things we noticed was that Netbook customers coming...

...online backup trialware will be next year that potentially can turn into paying storage customers, online backup customers for us. We have lots of customer **data**. It's a very effective utilization that we have on that **data** in our systems using some of our products that you heard about this morning. So that's the Cloud storage marketplace. Again, we're leaders...us to create a relationship with our customers that don't just have us protecting their PC, but any device that they use and the **data** and the information that's precious to them on those devices and even taking that beyond that to their identity and maybe even to the...
...backup for Android phones and for iPhones, available in the app markets for those different phones. It allows them to get anywhere access to their **data** and their information, so a convenience for them. The second thing that's important about this market is just the Android adoption is changing in...

...to www.acme.com's website. DNS translates that into an IP address that finds a server in the Internet that then serves back that **content**, that web page for you.

So DNS is a real critical area and, today, not very safe, right? So this is an opportunity for us...

...those DNS requests be filtered through our service. It's a nice extension of our safe web search capabilities. Therefore, we won't let that **content** come back to you if it's malicious or fraudulent or infected in any way. We'll instead direct you to other sites that are...

...service them in the field because when I like to send somebody it's really expensive? How do I back it up if there's **data** on it? How do I update it? How do I prevent **unauthorized** access?

Well, this is an incredible opportunity for us because we are in a unique position to help those device manufacturers using some of the...
...services that are in very high demand by this group of companies. We've invested in our first partner, (Mulcano), which is a security services **provider**. We're working with some of the first customers. So this is a very exciting area for us and something that we think is going...

...that there's monetization that occurs, not in front of the consumer, but occurs on the backend. There are things like DNS where we're **redirecting**. So there are lots of different business models, and each of those different areas I talked about when I talked about Norton Everywhere, there's...

...the impact that comes from customer behavior seeing it?

JANICE CHAFFIN: So what I can tell you is qualitative because I don't have the **data** myself right up here. But what we do know is that it is recognized by consumers. It is associated with trust in a transaction. It ...

... So that was not part of your thought process in the acquisition?

JANICE CHAFFIN: Oh, it certainly was. I just personally don't have the **data** offhand. I just know it was well recognized and perhaps somebody here can -- Enrique will test the statistics and comment. But fundamentally it's a...very broad portfolio security offerings, an update also on our new management platform that we think absolutely puts us in a position to blunt EPO. **Data** loss prevention has been a very nice acquisition recently, the asset coming from the Vontu acquisition.

We've been able to continue to build the...

...and Server Foundation into the biggest, most complex organizations that we serve.

We've got new products here that you've heard about, File Store **Data** Insight, very much representing this theme that we've been on all morning of product integration. So examples of how we have brought the security...

...low single digits over the next three years.

Moving on to revenue here, during FY08, FY09, on a constant currency basis -- the graphs are actual **data**. On a constant currency basis which we like to give you as well, we saw growth of 9%, 4% respectively year-over-year. Last year...three years, which are they? Well, PC Tools, MessageLabs is the basis of our software as a service offering, Vontu, as the basis of our **data** loss prevention business and SwapDrive, which is the basis of our online backup offering on the consumer side of our business.
As we look at...

...Security and Norton 360.

What we continue to see is a greater ability for us to retain customers for whom we are backing up their **data** online. I think it's fairly logical that that be the case and once you've, in essence, given your **data** to one **provider** it's going to be quite a hassle to go through the process of taking that away and giving it to a different **provider**.

Then the other key opportunity in my view for continuing to build customer lifetime value is really represented by what Lenny and Janice were talking ...

...will get a chance to meet with different executives.

Thank you very much. Thank you.

...on producing and supporting malware and various exploits such as
phishing and those who offer resources for rent such as botnets or hackers.
After the **data** is stolen the cyber criminal will either sell the
information to others who will monetize it through some fraudulent scheme
or the ...risk from the new and evolving group of unmonitored people from
partners, customers, and from within the very businesses who now interact
with the businesses' **data** and applications. Security beyond the
checkbox is an afterthought to this major retooling of IT.
     With this maniacal focus to make the business more competitive...

...difficult at best to meet the highly sophisticated cyber threats of
today. In this open and collaborative world knowing who is on the network,
what **data** they are viewing and ...are taking is a gapping blind
spot. This lack of visibility leads to undetected risks taking place
including unknown users on the network going unchecked,
unauthorized accesses, fraud and information leakage. According
to 2008 Verizon Breach Study Reports 74% of the companies that experienced
a breach did not detect it for networks, **data**, and applications,
and are oblivious to the real threat posed to their businesses. There is no
doubt that at this very second the next biggest too many ways for malware
to find it way on to the corporate network. Whether it is from a poisoned
DNS server **redirecting** traffic to criminal sites to phishing
attacks or SQL injections into highly vulnerable web applications, the
cyber criminal will get inside and attempt to locate...

... stop their process digitisation projects. They are vital to their
corporate survival. Companies need to start recognising that it is equally
important to secure their **data** and processes against attacks. To
thwart the efforts of the cyber criminal the key focus ...few important
needles in the haystack. Humans just can't do it without automation.
Automated enterprise visibility through technology that collects and
correlates relevant event **data** is the vital missing link from
which all companies will benefit by securing their business processes and
customer and partner interactions. This technology is called...

16713343 **Supplier Number:** 222479441

Qwest Rolls out Managed Security, Network Management Services Powered by IBM.
March 30 , 2010
Word Count: 778

... Service
      * Reduces the costs and complexities associated with managing
security needs, while mitigating the impact of liability and security
threats from malware, SPAM e-mail, **unauthorized** network access,
and internet resource misuse.
      * Enables customers to leverage Qwest expert tools, skills and
processes to improve their system uptime and performance, optimize security
...

...Qwest iQ(TM) Network Management Service
      * A network monitoring and management product suite that provides
complete out-tasking of all or part of customer's **data** network.
It is a comprehensive, integrated package of products and services for
building and proactively overseeing networks.
      * Enables customers to control operational costs, while improving...

...Business Markets Group Product Management "When we announced our
relationship with IBM, we showcased that Qwest would design and deliver new
solutions that let customers **redirect** their operational dollars
to strategic initiatives and make IT a competitive differentiator rather
than a cost center. Qwest is now delivering new mid-size business..

...of network infrastructure requirements. Users will appreciate the
powerful new tools that come from aligning IBM's expertise and capabilities
with a world-class services **provider** to deliver an exceptional
end-to-end customer experience."
      SUPPORTING RESOURCES

Tech apocalypse: Five doomsday scenarios for IT; Power grid hacks, massive DNS rerouting, solar flares -- end-times for IT may be more likely than you think.

March 15 , 2010
Word Count: 4166   **Line Count:** 00324

...attack against select Websites, the entire Internet suddenly stopped working -- or for that matter, Google could not be reached. What if instead of a mere **data** breach, our financial institutions were attacked by a weapon ...nation's power grid caused massive blackouts across the United States, leaving more than 300 million people without electricity for days.

The Supervisory Control and **Data** Acquisition (SCADA) systems that run U.S. power plants were built some 40 years ago, when the internet was just a handful of university computers...do the rest.

"Right now it's a system that's pretty wide open." says Sills. "There are any number of ways someone could make **unauthorized** transactions via routine maintenance. You could create an outage simply by pushing the wrong key."

What could happen: Like the grid itself, other failures tend ...EMP devices emit extremely high-frequency signals that fry electronics to a crisp, rendering them useless. An EMP will also wipe out or corrupt any **data** not stored on magnetic or optical devices. Worse, EMPs are largely untraceable, because the weapon itself destroys any evidence of its use.

A van with...One bomb exploded 300 miles over Kansas could take out most of the electronics in the United States," says Nordling.

What could happen: Workstations? Dead. **Data** centers? Gone. Cell phones might still work, but the cell towers probably won't, rendering them useless. Your car won't start. A large enough...to bounce back depends on how serious they were about disaster recovery before hell broke loose. Backup power generators, fuel supplies, alternative work facilities, redundant **data** centers in multiple locations, and a well-rehearsed plan for making it all work together are the key elements to disaster recovery, says Richard Rees...all power and communications lines to siphon off high-frequency radio signals. A less costly option is to put your critical systems into a modular **data** center that's protected against EMP attacks, which you can fail over to when needed. Emprimus Director of Security Jim Danburg adds that some, but...Nir Zuk, founder and CTO of Palo Alto Networks, a network security company.

For example: An IT manager installs GoToMyPC on a machine in the **data** center so that he can fix problems in the middle of the night from his home. But it has a weak password and gets hacked...his desktop across the Web.

Once inside, attackers could root around the network until they locate the command and control centers for Google's many **data** centers. And then they can turn out the lights, leave behind a logic bomb that corrupts Google's databases, or simply have their way.

"I'm not familiar with the structure of Google's network, but they must have a command and control app that lets them shut down their **data** centers," says Zuk. "Everyone does."

What could happen: Yahoo and Bing become swamped with search traffic, and might collapse under the ...do something stupid like sharing their desktop via WebEx," he says. "It only takes one to do it, and from there

the route to the **data** center is a quick one."

How to avoid this fate: To avoid getting nailed by rogue apps,
companies need greater visibility into their networks to...of IT service
management solutions.

To avoid being compromised by insiders, companies should get
real-time notifications of the activities of privileged users, block
specific **unauthorized** activities, and split the responsibility
for monitoring among multiple users, says Slavik Markovich, CTO at database
security firm Sentrigo.

"This last point is critical, as.. across multiple functions."

Tech doomsday scenario No. 4: The Net goes downNews flash: The
internet melted down today as millions of Web surfers found themselves
redirected to the wrong sites, thanks to problems with the
domain name server system.

Can the Internet be taken offline? Many experts scoff at the idea...
for example, could put attackers in charge of more than half the domains
for all U.S. financial institutions, says Rasmussen. From there, attackers
could **redirect** surfers to bogus sites and later use their
credentials to log in and drain their accounts. Or they could simply target
large domains with huge...

...NEWS!!
    Far East Energy Announces Progress of Winter Drilling Program; Added
Emphasis on Identifying Additional Areas of High Potential; Imminent Gas
Sales Agreement and Pipeline **Rerouting**; Project Finance
Planning; and Date for Annual Meeting
    HOUSTON, Feb 18, 2010 / -- Far East Energy Corporation (OTC Bulletin
Board: FEEC) announced today it has achieved...

...are parameter wells drilled several kilometers to the west and southwest
to obtain further information regarding the geographic extent of the high
permeability/high gas **content** area.
    The company also announced plans to rapidly begin producing these
wells, including a fracture stimulation program of ten wells to be
fractured in early...

...the west, south, and east with the goal of demonstrating that there is a
very large area of the Shouyang block that contains high gas
content as well as good-to-exceptional permeability. Of the five
wells to be spudded in April and early May, four will be parameter wells
seeking to ascertain how much of the northern area of the Shouyang Block
shares the same rare combination of high permeability and high gas
content discovered in the 1H pilot Area.
    It is rare to find high permeability and high gas **content**
together in the same coal. The San Juan Basin, is generally considered the
most prolifically producing CBM basin in the world, and is an example of
what can happen when high perm and high gas **content** are found in
combination along with synergistic geologic and hydrologic controls.
    "If our parameter wells continue to show good-to-excellent
permeability in combination with high gas **content**, that will go
a long way toward defining the value proposition for our company," said
Garry Ward, Senior Vice President of Engineering.
    To date, the...

...in the "fairway". Thus, we believe that the estimated high permeability
in the 1H Pilot Area and in the parameter wells, combined with high gas
content throughout, preliminarily indicates an area of very
promising gas productivity potential, particularly relative to typical
permeability rates in China.
    Far East is in discussions with...

.. Workers can now quickly and securely log-in to their personal desktop
within 5 seconds giving them access to all of the clinical applications and
data necessary to conduct their jobs. Meanwhile, the
data resides safely in the hospital's **data** center,
secure and unavailable to **unauthorized** users.
    HIMSS attendees will be able to demo this solution first-hand and
see how the technology comes together to provide caregivers quicker access
to...diligence is performed.

☐ Attack Attempts to Hijack Yahoo Hosting Customers' Websites.

Date: Dec 7 , 2009

3/6,K/24 (Item 24 from file: 16)
16430292   **Supplier Number:** 213705071

Attack Attempts to Hijack Yahoo Hosting Customers' Websites.
Dec 7 , 2009
Word Count: 489

...today issued a security advisory that warns the customers of website
hosting companies, including yahoo.com, against a new phishing attack aimed
at stealing their **content** management system log-in credentials.
The e-mails discovered by Trusteer appear to be from Yahoo.com (and other
website hosting firms) and ask website...

...cPanel/FTP account information. Using this information, criminals are
uploading look-a-like bank website pages to steal funds.
    cPanel is a very popular CMS (**Content** Management System),
used by many leading hosting providers, including Yahoo. It is used to
perform website operations, including FTP account control and setup, which
can be used to upload **content** to the cPanel-managed web site.
Over the past few days, Trusteer's security monitoring service has detected
a phishing email campaign targeting owners of...

...using cPanel-oriented messaging. The full report is available at:
http://www.trusteer.com/files/cPanel-FTP-Phishing-advisory.pdf
   "The ability to upload arbitrary **content** into relatively
small and less popular sites may seem un-interesting fraud-wise," said Amit
Klein CTO of Trusteer and head of the company's...

...few months connects cPanel-driven sites to online banking fraud. By
stealing cPanel login credentials, criminals do not need to use hacking
tools to upload **content** to a website, and therefore can avoid
detection until after they have siphoned funds from consumer and business
banking accounts."
